

William Monaghan

Will began his career in 2008 with the NHS Graduate Management Training Scheme. Over the years, he has held various operational management roles in major teaching hospitals, overseeing emergency, urgent, and routine care. He has managed significant investment programmes and served as the lead Director for the elective care transformation programme within an Integrated Care System (ICS).

With a keen interest in evidence-based healthcare management and the use of data and technology to drive change, Will transitioned to the role of Head of Delivery for NHS England's Chief Data Officer. His passion for transformational change through technology and his operational expertise led him to NHSX, where he was appointed Director of Operations. As Transition Director, Will played a pivotal role in merging NHSX, NHS Digital, and NHS England.

Currently, Will works as the Group Chief Digital Information Officer (CDIO) covering two large NHS acute teaching hospitals; Univeristy Hospitals of Leicester and University Hospitals of Northamptonshire. He is spearheading an ambitious programme to transform the organisation from one burdened by legacy, fragmented technology to one driven by user-centred digital services. His goal is to make it easier and safer to deliver and receive care.
