

4 DECEMBER 2026

EUROPEAN PATIENT SAFETY CONFERENCE 2026

Dr. Alexander Hoffelner (Austria)

Paediatric Resident, Division of Neonatology,
Paediatric Intensive Care and Neuropaediatrics,
Medical University of Vienna, Austria

Alexander Hoffelner is a paediatric resident at the Medical University of Vienna and Vienna General Hospital (AKH), specialising in neonatology and paediatric intensive care. His work bridges high-acuity clinical practice and medical education.

Within the Neo-STEPS research group (Smart Technologies for Education, Patient Safety and Simulation in Neonatology), he leads simulation- and technology-enhanced education projects, including interprofessional simulation and virtual reality formats for neonatal and paediatric emergencies.

His central interest is how a learning culture is actually built and sustained in clinical teams as everyday practice. As a core member of the paediatric simulation and patient safety team in Vienna, he designs and delivers in-situ and centre-based interprofessional simulation, trains debriefers, and translates simulation findings into departmental safety practice.
